Grit Vinyl

White

Grit is an innovative Stone Plastic Composite flooring (LVT / SPC) with a licensed, easy-install locking system. It comprises five layers, with a total thickness of 5 mm, including a special wear layer for protection against scratches, spills, and sun damage.

The Grit range offers easy, quick, clean, and quiet installation. With 7 colours available from UK stock, you have a diverse palette to craft your decorative, warm, and playful floor combinations.

Featuring waterproof Rigid Core technology, along with antibacterial and acoustic properties, this new LVT / SPC Collection is ideal for creating comfortable environments in various commercial settings, such as sports centres, schools, hospitals, offices, and other public spaces.

# Unglazed Porcelain Tile Care & Technical Information

## Removing Wax Coatings

Porcelain tiles often have a protective coat of transit wax to prevent scratching during transportation. It's important to remove this wax before grouting, especially for unglazed tiles that can be stained by coloured grouts. To remove the wax, use a mild abrasive cleaning product like Microscrub. Apply it to wet tiles, gently scrub with a pad or machine, and avoid excessive force. After removing the wax, clear any residue from tiles and gaps, rinse with water, and dry the floor. Conduct a patch test and follow manufacturer's instructions when using cleaning products.

## Sealing

Some of our porcelain ranges require sealing before grouting to prevent tile staining. Follow the manufacturer's instructions for proper sealing and allow the sealant to dry before grouting.

It is recommended to reseal the tiles after grouting and cleaning to ensure both the tiles and grout are adequately protected. Test the need for resealing by placing a small amount of water on the tiles and checking if it is absorbed. If absorption occurs, resealing is necessary.

## Cleaning

To prevent etching of porcelain tiles, promptly clean up spills, especially acidic substances like household chemicals, tea, coffee, and wine.

Maintain clean floor tiles with a regular cleaning routine: sweep or vacuum to remove debris, mop with a mild household cleaner or one formulated for unglazed porcelain tiles, rinse with clean water periodically, and ensure thorough drying to prevent water spots. Take extra care when cleaning textured tiles to remove any foreign residue that may become trapped.

## What is Porcelain?

Porcelain is actually a type of ceramic, the main characteristics of which are low porosity (absorption rates of less than 0.5%) and colour that penetrates the entire body of the tile, rendering it very durable. Porcelain can be either glazed or unglazed depending on the desired look and intended use.

## Floor Tile PEI Ratings

Grade 1 - Light domestic use - barefoot or soft footwear, i.e. bathrooms and bedrooms.

Grade 2 - Moderate domestic traffic - tiles suited to use in the home except in areas where there is direct access to outside such as hallways and kitchens.

Grade 3 - All domestic use - Suitable for all areas of the home including kitchens and hallways.

Grade 4 - Tiles suitable for domestic and public use where moderate to heavy traffic occurs, i.e. Hotel lobbies, restaurants and supermarkets.

Grade 5 - Tiles suitable for all types of use weather, domestic or in public areas of heavy traffic.

## Ink Jet Printing

The latest tiles are produced using inkjet technology which can print exact reproductions of natural stone or wood in very high definition even on tiles with uneven surfaces, making them difficult to tell apart from the real thing.

# Technical Information & Calibration and Shading Disclaimer

## Unglazed Porcelain

These tiles are extremely durable and frost proof. The initial tile is matt in finish. The same tile can then be either semi or fully polished. Polishing unglazed porcelain results in a high gloss finish. Unfortunately, polished porcelains are more susceptible to staining because dirt gets trapped in the opened surface pores. Sealants or other pre-surface treatments can prevent this problem as a routine re-application of the protective treatment is maintained.

## Glazed Porcelain

These tiles have a glaze applied over the porcelain body and it is therefore the glaze's hardness that determines where the tile can be used, in the same way as normal ceramic tiles. Some glazed porcelain can be used outside as the body is frost resistant.

## Slip Resistance

There are various ways of measuring slip resistance. Two of the most commonly seen in this country are the pendulum test and the ramp test. We have used ramp test ratings throughout the brochure where available. The dry ramp test measures slip resistance for areas of wet shoe traffic. The R value is greater in areas of higher resistance to slipping. The wet ramp test measures slip resistance for areas where people will be walking with wet bare feet. It is measured in values of A to C. A is suitable for mainly water splash areas for example bathrooms, B is for pool surroundings, shower areas etc and C is for walk through pools, ramps into pools etc.

## Calibration & Shading Disclaimer

Tiles are produced in batches, and a degree of shading is inherent in the manufacturing process. It is important to examine the tiles and make sure that there is an acceptable blend of shades before starting to tile. We cannot accept any claims or returns for shading purposes once the tiles have been fixed to the wall or floor.

It is important to note that calibration and shading are not the only factors to consider when choosing ceramic or porcelain tiles. Other factors such as durability, slip resistance, and suitability for different applications should also be taken into account.

Furthermore, the variations in raw materials, firing temperatures, and other factors that contribute to shading cannot be completely eliminated. While efforts are made to sort and grade tiles to minimize shading, some degree of variation is to be expected. Please ensure that you purchase enough tiles for the job, as we cannot guarantee that subsequent batches will be exactly the same shade.

We recommend that you read and understand any disclaimers or warnings provided by the manufacturer of the tiles before purchasing or using them. These may include information about recommended uses, limitations, and precautions to take during installation and use.

In no event will we be liable for any loss or damage arising from the use of this information. Any reliance you place on this information is strictly at your own risk.
